

TO WHOM SO EVER IT MAY CONCERN

This is to acknowledge that Sim Infosystems has supplied the 210 MW Power Plant Simulator to our client **EÜAŞ Kumburgaz Eğitim Merkezi Müdürlüğü**, Turkey during 2012. EÜAŞ is the biggest state owned company, managing 43,4% (24.774,8 MW) of the installed capacity of Turkey as of 2012.

EÜAŞ established an acceptance committee, assigning its top engineers from all areas of thermal power plant, including mechanical, chemical, electrical, control, operations and maintenance engineering. The client engineers have tested the simulator extensively for its design, dynamic behavior, start-up, shutdown and emergency scenarios and found the performance of the simulator is in-line with the real plant behavior. The client has acknowledged and accepted the 210 MW simulator supplied by us and using it to train their operating personal from January 2013. More than 250 technical personnel has been trained as of today. Trainees also reported very positive feedback and acknowledged the simulator's dynamic responses to different inputs.

We would like to thank to Sim Infosystems engineers, Mr. Jayaraman Prasanna Venkatesh and Mr. Chandran Sivaraman for their excellent performance during commissioning in Turkey. We also appreciate the post supply support services provided by Sim Infosystems.

Yours Sincerely,

Ümit Tüzel  
General Manager  
Flexent Power Systems
